Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, and comply with the guidelines when using it.

Transportation Requirements

CAUTION

- Transport the device under allowed humidity and temperature conditions.

Storage Requirements

CAUTION

- Do not place the device in a place exposed to sunlight or near heat sources.
- Store the device under allowed humidity (5%–90% (RH)) and temperature (–20 °C to +60 °C, or –4 °F to +140 °F) conditions.

Installation Requirements

WARNING

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electrical safety code and standards. Make sure that the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid safety risks and damage to the device.
- Please follow the electrical requirements to power the device.
  - Following are the requirements for selecting a power adapter.
    - The power supply must conform to the requirements of IEC 60950-1 and IEC 62368-1 standards.
    - The voltage must meet the SELV (Safety Extra Low Voltage) requirements and not exceed ES-1 standards.
    - When the power of the device does not exceed 100 W, the power supply must meet LPS requirements and be no higher than PS2.
  - We recommend using the power adapter provided with the device.
  - When selecting the power adapter, the power supply requirements (such as rated voltage) are subject to the device label.

CAUTION

- Do not install the device in a place near heat sources. Keep the device away from dampness, dust, and soot.
- Do not putthe productin flammable or corrosive gaseous environment, which may cause fire or damage the product. Placing the product in proximity to flammable gas can easily result in a dangerous explosion.
- Do not place any items on the product. The product may be damaged if foreign objects enterthe internal unit.
- If the product is installed on the wall, ensure all mountinghardware areproperly secured duringinstallation.

Operation Requirements

WARNING

- Use the standard power adapter. We will assume no responsibility for any problems caused by the use of a nonstandard power adapter.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- Do not tread on or squeeze the power line, especially the plug or connection point of the power line to the product.
- Please firmly grasp the plug of the connecting line when inserting and removing.Pulling the connecting line might cause damage to it.
- Turn off the power when cleaning the product.
- Do not touch any fixed components inside the product. If not, it may cause product damage or personal injury.

CAUTION

- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Operate the device within the rated range of power input and output(DirectCurrent). Use the device under allowed humidity and temperature conditions.
- Check whether the power supply is correct before use.
- Operating temperature: 0 °C to 40 °C (32 °F to 104 °F).

Maintenance Requirements

CAUTION

- Power off the device before maintenance. Do not use the liquid cleaner or spray cleaner when cleaning the device.
- Use the clean and soft cloth or use the special lens wiping cloth when cleaning the surface of display screen. Do not use the wet cloth to clean the display screen. Otherwise, it may do harm to the screen.

Port	Function
TYPE-C	x2/ TYPE-C (full-function). They are used to connect devices with Type-C ports for power supply and data transmission. Additionally, these ports can supply power to the product itself. when the product is connected to an adapter, another Type-C port can enable reverse charging.
HDMI	x1/ HDMI 1.4 (1920 x 1080@60 Hz) Use the HDMI cable to connect the HDMI IN interface of the product to the HDMI OUT port of a PC.

NOTE

The above ports are for reference only, the actual ports of different types of monitors may be slightly different from the ports in the figure, and everything is subject to the ports and functions of the actual product.

5 Menu Description

Volume Adjustment

Adjust the volume level.

When not connected to a power source, the default volume is 50, and the maximum adjustable volume is 50. When connected to a power source, the default volume is 100, and the maximum adjustable volume is 100.

Brightness Adjustment

Adjust the brightness level.

When not connected to a power source, the default brightness is 50, and the maximum adjustable brightness is 50.

When connected to a power source, the default brightness is 80, and the maximum adjustable brightness is 100.

Contrast Adjustment

Adjust the contrast level.

The default contrast is 50.

When not connected to a power source, the maximum adjustable contrast is 50. When connected to a power source, the maximum adjustable contrast is 100.

Low Blue Light Mode

The Low Blue Light Mode can be turned on or off.

When enabled, it effectively reduces blue light exposure to the eyes and alleviates visual fatigue.

Mute Mode

The Mute Mode allows you to turn on or off the built-in speaker of the portable monitor.

Type-C Mode

The display can be switched to the Type-C channel.

HDMI Mode

The display can be switched to the HDMI channel.

FreeSync Mode

The FreeSync function can be turned on or off, and it is only available when connected to a power source.

Reset

Touching this key will restore the portable monitor settings to the default factory settings.

Previous Page

Touching this key switches the menu to the previous page's function area.

Next Page

Touching this key switches the menu to the next page's function area.

Exit

Touching this key exits the menu.

HDR Mode

The HDR mode can be turned on or off, and it is only available when connected to a power source.

Language Selection

Multiple languages are selectable, including Chinese, English, German, French, Korean, and Japanese.

Scene Mode

Multiple scene modes can be switched, including Standard, Movie, Game, Text, FPS, and RTS modes. This function is only available when connected to a power source.

Color Temperature

Two preset color temperatures are selectable: 6500K (warm tone) and 9300K (cool tone). In addition, there is a USER mode that allows you to manually adjust the color temperature to a suitable level.

NOTE

The OSD features in the table above are for reference only and may differ from the actual display, so the OSD features of the actual display shall prevail.

6 FAQ

1. The product supports one-cable (Type-C cable) direct connection to devices such as mobile phone, laptop, and gaming console, enabling power supply, display, and touch control functions. Accessories does not include a power adapter. When using the Type-C interface of an external device for screen display, please ensure the external device is equipped with a full-function Type-C interface (capable of signal transmission).
2. When directly connected to an external device (without power adapter), the product will activate power-saving mode to ensure stable operation, functions that increase the power consumption will be restricted. If the external device has insufficient power to supply this product, please connect power adapter.
3. When connected to the power adapter, the other Type-C interface of the product supports reverse charging. If the reverse charging function does not operate correctly, please verify the power specifications required by the external device. The output power of the adapter you use must be at least 15W higher than the rated power of the external device. The maximum output power supported by this product is 45W.

Appendix 1 Security Commitment and Recommendation

Dahua Vision Technology Co., Ltd. (hereinafter referred to as "Dahua") attaches great importance to cybersecurity and privacy protection, and continues to invest special funds to comprehensively improve the security awareness and capabilities of Dahua employees and provide adequate security for products. Dahua has established a professional security team to provide full life cycle security empowerment and control for product design, development, testing, production, delivery and maintenance. While adhering to the principle of minimizing data collection, minimizing services, prohibiting backdoor implantation, and removing unnecessary and insecure services (such as Telnet), Dahua products continue to introduce innovative security technologies, and strive to improve the product security assurance capabilities, providing global users with security alarm and 24/7 security incident response services to better protect users' security rights and interests. At the same time, Dahua encourages users, partners, suppliers, government agencies, industry organizations and independent researchers to report any potential risks or vulnerabilities discovered on Dahua devices to Dahua PSIRT, for specific reporting methods, please refer to the cyber security section of Dahua's official website.

Product security requires not only the continuous attention and efforts of manufacturers in R&D, production, and delivery, but also the active participation of users that can help improve the environment and methods of product usage, so as to better ensure the security of products after they are put into use. For this reason, we recommend that users safely use the device, including but not limited to:

1. Account Management

1.1 Use complex passwords

Please refer to the following suggestions to set passwords: The length should not be less than 8 characters;

- Include at least two types of characters: upper and lower case letters, numbers and symbols; Do not
- contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.; Do not use repeating characters, such as 111,
- aaa, etc.

1.2 Change passwords periodically

It is recommended to periodically change the device password to reduce the risk of being guessed or cracked.

1.3 Allocate accounts and permissions appropriately

Appropriately add users based on service and management requirements and assign minimum permission sets to users.

1.4 Enable account lockout function

The account lockout function is enabled by default. You are advised to keep it enabled to protect account security. After multiple failed password attempts, the corresponding account and source IP address will be locked.

1.5 Set and update password reset information in a timely manner

Dahua device supports password reset function. To reduce the risk of this function being used by threat actors, if there is any change in the information, please modify it in time. When setting security questions, it is recommended not to use easily guessed answers.

2. Service Configuration

2.1 Enable HTTPS

It is recommended that you enable HTTPS to access Web services through secure channels.

2.2 Encrypted transmission of audio and video

If your audio and video data contents are very important or sensitive, we recommend you to use encrypted transmission function in order to reduce the risk of your audio and video data being eavesdropped during transmission.

2.3 Turn off non-essential services and use safe mode

If not needed, it is recommended to turn off some services such as SSH, SNMP, SMTP, UPnP, AP hotspot etc., to reduce the attack surfaces.If necessary, it is highly recommended to choose safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption and authentication passwords. SMTP: Choose TLS
- to access mailbox server.
- FTP: Choose SFTP, and set up complex passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up complex passwords.

2.4 Change HTTP and other default service ports

It is recommended that you change the default port of HTTP and other services to any port between 1024 and 65535 to reduce the risk of being guessed by threat actors.

3. Network Configuration

3.1 Enable Allow list

It is recommended that you turn on the allow list function, and only allow IP in the allow list to access the device. Therefore, please be sure to add your computer IP address and supporting device IP address to the allow list.

3.2 MAC address binding

It is recommended that you bind the IP address of the gateway to the MAC address on the device to reduce the risk of ARP spoofing.

3.3 Build a secure network environment

In order to better ensure the security of devices and reduce potential cyber risks, the following are recommended: Disable the port mapping function of the router to avoid direct access to the intranet devices from external network; According to the actual network needs, partition the network: if there is no communication demand between the two subnets, it is recommended to use VLAN, gateway and other methods to partition the network to achieve network isolation;
Stablish 802.1x access authentication system to reduce the risk of illegal terminal access to the private network.

4. Security auditing

4.1 Check online users

It is recommended to check online users regularly to identify illegal users.

4.2 Check device log

By viewing logs, you can learn about the IP addresses that attempt to log in to the device and key operations of the logged users.

4.3 Configure network log

Due to the limited storage capacity of devices, the stored log is limited. If you need to save the log for a long time, it is recommended to enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

5. Software Security

5.1 Update firmware in time

According to the industry standard operating specifications, the firmware of devices needs to be updated to the latest version in time in order to ensure that the device has the latest functions and security. If the device is connected to the public network, it is recommended to enable the online upgrade automatic detection function, so as to obtain the firmware update information released by the manufacturer in a timely manner.

5.2 Update client software in time

We recommend you to download and use the latest client software.

6. Physical protection

It is recommended that you carry out physical protection for devices (especially storage devices), such as placing the device in a dedicated machine room and cabinet, and having access control and key management in place to prevent unauthorized personnel from damaging hardware and other peripheral equipment
(e.g. USB flash disk, serial port).
